

END-TO-END SOLUTIONS.

For more than 25-years, Power Costs, Inc. (PCI) has been the premier provider of essential software solutions to domestic and international energy marketing, supply and trading firms. Having evolved far beyond our beginnings solely as a supplier of asset optimization software, PCI today provides market participants (and non-participants) with an array of solutions to capitalize on opportunities, maximize portfolio capabilities and increase profits.

PCI CLIENTS

- Investor Owned Utilities
- Municipal and Cooperative Utilities
- Independent Power Producers
- Marketers and Traders

PCI is a highly trusted name in the energy business. We understand our customers' needs based on decades of experience and deploy solutions that ensure success and a strong ROI.

PCI tools and processes bring efficiency and reliability to your operation, whether you operate inside of an ISO or as an independent entity outside of controlled market operations.

Hosted and non-hosted installation options are available, and PCI works very closely with you to understand the unique needs of your business in order to tailor the right solution to meet or exceed those requirements.

Bottom-line: PCI provides practical, value-added solutions that deliver measurable results and high ROI for your enterprise.

PCI'S SOFTWARE PLATFORM

PCI solutions can be locally installed or hosted and cover a broad array of capabilities to address all the diverse needs within your organization.

-  ASSET & PORTFOLIO OPTIMIZATION
-  ISO BIDDING & SETTLEMENTS
-  SCHEDULING, E-TAGGING & ETRM
-  ENERGY ACCOUNTING & MDM
-  ASSET OPERATIONS & OUTAGE MANAGEMENT
-  POST-ANALYTICS & KPIS
-  GAS MANAGEMENT
-  TRANSMISSION OPERATIONS & BILLING
-  REPORTING & BUSINESS INTELLIGENCE (BI)
-  CONTRACT SETTLEMENTS & COMPLIANCE REPORTING
-  SYSTEM INTEGRATION & AUTOMATION
-  SECURED CLOUD HOSTING ENABLED

PCI SOFTWARE SOLUTIONS

PCI gives business users and IT professionals maximum usability and flexibility.

ASSET/PORTFOLIO OPTIMIZATION - GENTRADER®

Conduct detailed asset and portfolio optimizations, both inside and outside of ISO markets, for time horizons ranging from sub-hourly out to 30-years.

ISO FRONT & BACK OFFICE - GENMANAGER®

Facilitate robust ISO communication and data exchange, forecast LMPs, conduct strategic bidding and deep dive analytics. Download ISO settlement statements, perform pre-settlement, shadow settlement and dispute submission/tracking for all power and transmission deals, all market instruments and all charge types.

INTEGRATION & AUTOMATION - GENPORTAL®

The primary platform and API for PCI's entire software footprint, GenPortal® automates workflows and delivers management dashboards, customized applications and advanced features to front and back office personnel.

ENERGY ACCOUNTING

Manage, automate and streamline the calculation and validation of generation and load meters, interchange schedules (tie line flows) in and out of defined areas, as well as identification of meter errors.

ASSET OPERATIONS

An integrated set of applications (revolving around a core Outage Management System) that streamline communications between plants, the front office and any ISO. PCI Asset Operations better manages outages, declarations, auditing and reporting.

TRANSMISSION BILLING & OPERATIONS

Streamline generation dispatch, balancing authority operations, interchange accounting, load calculations and transmission customer billing. Exchange, monitor and collect data with ISOs, neighboring BAs and reliability coordinators to improve accuracy in settlement and after-the-fact billing while ensuring stable operation of the grid.

GAS MANAGEMENT

Communicate with gas pipelines and optimize bid-to-bill workflows (as well as gas positions) to arbitrage between electricity and gas markets.

ETRM

Automate and streamline trading, scheduling, tagging and settlement workflows for any deal and any commodity.

POST ANALYSIS

Generate Key Performance Indices (KPIs) and facilitate operational improvements by performing costing analyses of operating efficiency, energy market transactions and lost opportunities.

DATA WAREHOUSE

Integrate, manage and analyze vast amounts of market data from multiple sources/platforms and establish dimensional databases for storage and export.

BUSINESS INTELLIGENCE

Speed-up the analysis of large data sets to generate reports that measure progress, recognize opportunities and identify danger signs.

MARKET LEADERSHIP

- More than half the generation capacity in the U.S. is optimized using PCI software.
- Over 60% of the Fortune 500 Utility & Energy companies use PCI to reduce their operational costs and maximize revenues.

- SINGLE CLIENTS
- MULTIPLE CLIENTS
